

ASX ANNOUNCEMENT

26 November 2019

TRANSFORMATIONAL HELIUM ACREAGE ACQUISITION

- Big Star acquires an additional 21,824 gross (21,824 net) acres in Colorado
- 23,294 net acres now leased, an increase of over 1400%
- Enterprise leased acres increase by over 160% to 3,473 net acres
- Significant new leasing over 7 additional highly ranked prospects

Big Star Energy Ltd ("Big Star" or the "Company") (ASX:BNL) is pleased to announce that it has acquired 21,824 gross (21,824 net) acres in 63 new leases in Colorado, USA at the State land auction.

Big Star Managing Director, Joanne Kendrick, commented "This truly is a transformational moment for the Company. These acquisitions at the State land auction, in addition to our existing acreage, bring us to 27,104 gross (23,294 net) acres across 9 prospects, significantly exceeding our targets and making us, by far, the dominant player in this highly prospective area.

"Encouragingly, we now have 3 prospects where our leases include locations sampled during our recent soil gas survey. All samples collected on the land that we have now leased returned positive helium readings of between 10-50% above normal atmospheric levels confirming an active helium system in the area.

"Following our successful helium acreage acquisition, I am excited to make a start on our next objective. We plan to design and permit a 5-well drilling programme early next year whilst we consolidate our acreage over these prospects. With success in our proposed drilling campaign, any discovered high-concentration helium accumulation would potentially be developed using a pressure swing adsorption plant. A standard-size PSA plant can process 2mmcf/day of raw gas (with 5-10% helium) to a saleable product stream with 98%+ helium concentration and requires between 5,000-10,000 acres to fill to capacity."

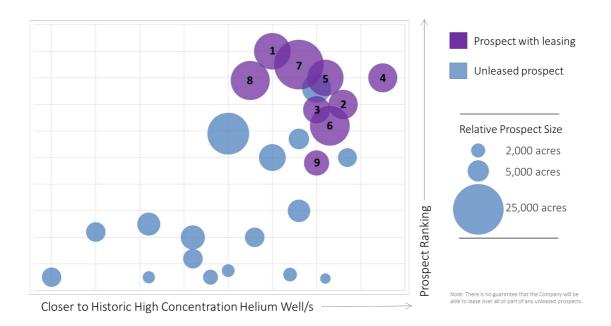

Figure 1: Prospects and Leads Portfolio in Las Animas, Colorado

Big Star's prospects and leads ranking has been driven by our regional and local structural mapping, proximity to historic high-concentration helium wells and the active helium systems proven by our proprietary regional soil gas survey completed earlier this year. Continued integration of proprietary geophysical and helium soil gas survey data into the geologic model over the last two months has resulted in improved delineation and greater confidence in prospect sizes and ranking. Notably, the areal extent of Enterprise has increased significantly as a result of this latest work.

The current leased acreage position over 9 of Big Star's prospects is described in Table 1 below. Acreage over the previously leased Enterprise has increased by over 160% and 7 new prospects now have substantial leasing as a result of the State auction acquisitions. This includes 2 prospects (in addition to Enterprise) where soil gas samples were collected from currently leased areas and returned positive helium readings.

Prospect	Prospect	Gross Leased	Net Leased	Elevated Helium Readings
#	Name	Acres	Acres	From Soil Gas Sample
1	Enterprise	7,283	3,473	5
2	Voyager	160	160	No samples collected
3	Prometheus	1,686	1,686	No samples collected
4	Millennium	1,920	1,920	No samples collected
5	Falcon	2,723	2,723	2
6	Red Dwarf	3,283	3,283	No samples collected
7	Galactica	6,360	6,360	2
8	Serenity	3,050	3,050	No samples collected
9	Defiant	640	640	No samples collected
	Total	27,104	23,294	9

Table 1: Summary of Prospects with Leasing

The new leases are for an initial term of 5 years with the right to request an extension of 1 year and an annual rental payment of US\$2.50/acre payable in advance. In the event that Big Star successfully produces helium or other products from the lease area, a 20% royalty will be payable to the State of Colorado and the lease term will be extended indefinitely until production ceases.

The leases do not include any minimum work commitments. The consideration for the new leases is US\$73,946 comprising the first year's rental of US\$54,560 and lease bonuses, application and other fees of US\$19,386. The Company is the only working interest owner in the leases.

Further details of the new leases are set out in Appendix A. The new leases include 4 samples obtained during the regional gas survey referred to in the Company's announcement of 19 September 2019. These are described in Appendix B.

For further details in relation to oil and gas leases in the US see the Company's announcement of 19 September 2019.

About Big Star:

Big Star Energy Ltd (ASX:BNL) is an independent oil and gas exploration and production company, headquartered in Australia, with operations and exploration in North America. Big Star's strategy is to provide its shareholders with exposure to multiple high-value helium projects and conventional oil assets in North America. For further information please visit the Company's website at www.bigstarenergy.com.au

About Helium:

Helium is a unique industrial gas that exhibits characteristics both of a bulk, commodity gas and of a high value specialty gas and is considered a "high tech" strategic element. Due to its unique chemical and physical qualities, helium is a vital element in the manufacture of MRIs and semiconductors and is critical for fibre optic cable manufacturing, hard disc manufacture and cooling, space exploration, rocketry, lifting and high-level science. There is no way of manufacturing helium artificially and most of the world's reserves have been derived as a by-product of the extraction of natural hydrocarbon gas.
